

SQL Fundamentals

Aggregate Functions

Sum

Average

Count

Number of Students
6

➤ Select Count (Distinct Students_id) AS Number of Students from Students;

Counting number of students in the class using their id

- We Count something that is uniquely identified like an ID
- we don't Sum an ID, rather we Count an ID
- We don't Count the revenue, we Sum the revenue
- We don't Count Money, we Sum it up

Group by Statement

➤ Allow us to group our data into specific Category

- Count (distinct Student_id) AS No. of Studs

➤ I am Counting number of Students in my class

➤ From Students

Group by Subject

[We group by a Column that is not Aggregated in the Select Statement
We commonly group by a Categorical Column
Not aggregated, Means to Classify Categorical Columns
Aggregated Column

Select Subject, Count (distinct Student_id) AS No. of Studs
